## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of claims 3-5 in the reply filed on 03/12/2008 is acknowledged. The traversal is on the ground(s) that "...no adequate reasons and/or examples have been provided to support a conclusion of patentable distinctiveness between the identified groups". This is not found persuasive because the product can be made by another and materially different process, such as coating (class 427) or sputtering (class 204) as recited in the restriction requirement of 02/11/2008.

The requirement is still deemed proper and is therefore made FINAL.

As stated in MPEP 2113 [R-1] "[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). Once a product appearing to be substantially identical is found and a 35 U.S.C. 102/103 rejection is made, the burden shifts to the applicant to show an unobvious difference "The Patent Office bears a lesser burden of proof in making out a case of prima facie obviousness for product-by-process claims because of their peculiar nature" than when a product is claimed in the conventional fashion. In re Fessmann, 489 F.2d 742, 744, 180 USPQ 324, 326 (CCPA 1974). Once the examiner provides a rationale tending to show that the claimed product appears to

be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product. In re Marosi, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir.1983). Accordingly since the resulting product appears to be the same the instant claims are anticipated by and/or rendered obvious by the references.

***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Information Disclosure Statement***

The PTOL 1449s of 09/19/2005 and 02/01/2006 have been received, reviewed and considered.

***Claim Rejections - 35 USC § 112***

3. Claim 1 recites the limitation "...hexagonal crystal structure..." in line 5. There is insufficient antecedent basis for this limitation in the claim. Please insert the word --a-- before "hexagonal" for proper antecedence.

***Allowable Subject Matter***

4. As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Art Unit: 1792

5. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claim 1 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record does not teach nor render obvious the instantly claimed invention. There is no teaching in the art to perform the process that is now claimed.

The prior art does teach transformation of the crystal structure of a Group XIII nitride from hexagonal to cubic by a static pressure application process. However, the prior art does not teach forming a cubic nitride as a film on a substrate, such as glass or metal with the substrate having 4GPa or greater, as stated in the instant invention.

There is no motivation in the art to change the prior art's teaching of to arrive at the instantly claimed process.
